Video Game for Blind

Playing video game is fun for all. The excitement to reach to the further level and earn the highest number of points is really fascinating. But have you thought that can the visual graphics be a limitation for the blind, well obviously they cannot play the normal video games. However, we can overcome these limitations and build a video game which the blind people can play and enjoy too. In this project, we will work on some tools and using some basic principles, develop a game which will be entertaining for the visually impaired people.
