

NEURAL PLASTICITY AND DISORDERS OF THE NERVOUS SYSTEM

AAGE MØLLER

UNIVERSITY OF TEXAS AT DALLAS

Providing comprehensive coverage of the pathophysiology of neurological disorders, this work emphasizes those disorders where expression of plasticity is evident. It includes the basis for the expression of neural plasticity; how reorganization of the nervous system can cause hyperactivity in sensory systems producing central neuropathic pain, tinnitus and paresthesia; the role of little-known non-classical pathways in pain and sensory disorders and their subcortical connections; hyper- and hypoactivity of motor systems after injury, and the role of spinal reflexes and internal processing in the spinal cord.
