Guidelines for replication

Files
1) gmm_spatial.do – STATA do file.
2) me_data.dta - STATA dataset for Tables 1-10
3) me1950.dta - STATA dataset for Tables 1A and 2A

Procedure

Replication process is straightforward. Open the 'gmm_spatial.do' file and change the working directory to the location you want your results to be stored (using the *cd* command). Make sure that all the three files are in the working directory you set. Run the codes. STATA will write the results in .csv files with file names easy to identify. If the codes are run correctly, there will be 6 csv files with results in the working directory.
