School of Social Sciences

The social sciences are concerned with the study of people, individually and in groups and collectivities. Social scientists ask such questions as: How are groups formed? How do people produce and distribute goods? Why do cities grow, and why do some cities decay? What are the causes of war, of racial discrimination, of revolutions? What role does law play in our society? And, how can we improve our quality of life?

Thus, the major concern of the social sciences is the testing of ideas about social, political, and economic institutions. The methods of study and research may range from quiet introspection to participant observation in a community setting to the manipulation of computerized data using advanced statistical techniques. Yet in this great diversity there remains a shared commitment to the description, explanation, and prediction of human behavior -- to understanding. And increasingly, social scientists have added a commitment to action: applying their ideas to real-world situations.

Government and Politics (B.A.)

Government and Politics includes the study of political institutions, organizations, processes, and ideas. It provides an understanding of the workings of government, the activities of politicians and public officials, both elected and appointed, and the ways government affects and is affected by various actors, including individuals.
