Erik Jonsson School of Engineering and Computer Science

Named in honor of one of the three founders of Texas Instruments, Inc. and of The University of Texas at Dallas, the Erik Jonsson School of Engineering and Computer Science provides undergraduate degree preparation for professional practice as an engineer or computer scientist. Particular emphasis is placed on developing strong analytical and problem solving abilities as a foundation for graduate study in these fields.

The school's curricula emphasize electronic information processing devices and technologies that are involved with the acquisition, interpretation, transmission, and utilization of information. The Computer Science program emphasizes the design and analysis of efficient parallel and sequential algorithms with applications in VLSI layout and routing, distributed networks and operating systems, image processing, computational geometry, automation and robotics, and program testing and validation. The school offers three engineering programs: Electrical Engineering, Telecommunications Engineering and Software Engineering. The Electrical Engineering program offers students an opportunity to acquire a solid foundation in the broad areas of electrical engineering and emphasizes advanced study in digital systems, telecommunications, and microelectronics. The Telecommunications Engineering program is interdisciplinary. Telecommunications Engineering requires a blend of knowledge from the areas of Electrical Engineering, Computer Science, and Economics/Policy. The Software Engineering program concentrates on all aspects of software development including requirements engineering, software architecture and design, program testing, validation, and quality assurance. The Electrical Engineering, Telecommunications Engineering, Software Engineering and Computer Science programs are based on a solid foundation of science and mathematics coursework. Students in these programs are given an opportunity to learn to extend their abilities to analyze and solve complex problems and to design new uses of technology to serve today's society. The engineering programs provide an integrated educational experience directed toward the development of the ability to apply pertinent knowledge to the identification and solution of practical problems in electrical and telecommunications engineering. These programs ensure that the design experience is developed and integrated throughout the curriculum in a sequential development leading to advanced work and includes both analytical and experimental studies. Established cooperative education programs with area industry further supplement design experiences.

The University of Texas at Dallas is located at the heart of a high concentration of companies that specialize in the areas of microelectronics, telecommunications, signal processing and optics. The Erik Jonsson School of Engineering and Computer Science maintains close relationships with these companies and has established cooperative programs through which students can obtain industrial experience to complement their classroom instruction. Details of specific cooperative programs between computer science and engineering students and local companies are available in the respective program offices. Computer Science (B.S.)

The program of study for the B.S. in Computer Science is designed to offer students opportunities to prepare for an industrial, business, or governmental career in a rapidly changing profession and to prepare for graduate study in a field in which further education is strongly recommended. The school offers a "fast track" B.S./M.S. option; see Fast Track Baccalaureate/Master's Degree Program.

In addition to foundation courses in the natural sciences, the major includes a strong mathematical component. The computer science program includes operating systems, computer architecture, programming languages, data structures, software engineering, and automata theory. Electives include theoretical and practical courses in both computer science and electrical engineering.
3 + 2 Programs

The University of Texas at Dallas offers "3 + 2" programs with Abilene Christian University, Austin College, Paul Quinn College, and Texas Woman's University. These programs combine the strengths of these respective institutions with those of The University of Texas at Dallas, and permit students to earn two undergraduate degrees simultaneously while preparing for a professional career in engineering. Full-time undergraduate students attend one of the institutions listed above, majoring in mathematics, physics, or computer science for three years, and then continue their education for two years at The University of Texas at Dallas, majoring in electrical engineering. After completion of the program, students receive the Bachelor of Science degree in their chosen major from one of the above institutions and the B.S.E.E. degree from U.T. Dallas. Further details of the individual programs and persons to contact at the respective institutions can be obtained from the U.T. Dallas Electrical Engineering Program Office.

Engineering (B.S.E.E. and B.S.T.E.)

The school offers three engineering programs: Electrical Engineering, Telecommunications Engineering and Software Engineering. The Electrical Engineering program offers students an opportunity to acquire a solid foundation in the broad areas of electrical engineering and emphasizes advanced study in digital systems, telecommunications, and microelectronics.

The Electrical Engineering program offers students a solid educational foundation in the areas of electrical networks, electronics, electromagnetics, computers, digital systems, and communications and is accredited by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology (ABET). Mastery of these areas provides students with the ability to adapt and maintain leadership roles in their post-baccalaureate pursuits through the application of fundamental principles to a rapidly changing and growing discipline.

Students in the Electrical Engineering program take either the general program or specialize in microelectronics or telecommunications, and can take advanced courses in computer hardware and software; the analysis and design of analog and digital communication systems; analog and digital signal processing; the analysis, design, and fabrication of microelectronic components and systems; and guided and unguided wave propagation. A broad choice of electives (within and external to electrical engineering) allows students to broaden their education as well as develop expertise in areas of particular interest. In keeping with the role of a professional, students are expected to develop communication skills and an awareness of the relationship between technology and society.

The Telecommunications Engineering program is interdisciplinary. Telecommunications Engineering requires a blend of knowledge from the areas of Electrical Engineering, Computer Science, and Economics/Policy.

The Software Engineering program concentrates on all aspects of software development including requirements engineering, software architecture and design, program testing, validation, and quality assurance.

These programs are based on a solid foundation of science and mathematics coursework. Students in these programs are given an opportunity to learn to extend their abilities to analyze and solve complex problems and to design new uses of technology to serve today's society. The engineering programs provide an integrated educational experience directed toward the development of the ability to apply pertinent knowledge to the identification and solution of practical problems in electrical and telecommunications engineering. These programs ensure that the design experience, which includes both analytical and experimental studies, is integrated throughout the curriculum in a sequential development leading to advanced work. Design problems are frequently assigned in both lecture and laboratory courses. Each student is required to complete a major design project during the senior year. In addition, established cooperative education programs with area industry further supplement design experiences.
High School Preparation

Engineering education requires a strong high school preparation. Pre-engineering students should have high school preparation of at least one-half year in trigonometry and at least one year each in elementary algebra, intermediate and advanced algebra, plane geometry, chemistry, and physics, thus developing their competencies to the highest possible levels and preparing to move immediately into demanding college courses in calculus, calculus-based physics, and chemistry for science majors. It is also essential that pre-engineering students have the competence to read rapidly and with comprehension, and to write clearly and correctly.

Lower-Division Study

All lower-division students in either Electrical Engineering or Telecommunications Engineering concentrate on mathematics, science and introductory engineering courses, building competence in these cornerstone areas for future application in upper-division engineering courses. The following requirements apply both to students seeking to transfer to U.T. Dallas from other institutions as well as to those currently enrolled at U.T. Dallas, whether in another school or in the Erik Jonsson School of Engineering and Computer Science.

ABET Requirements

All engineering degree plans must satisfy the requirements specified by the Accreditation Board for Engineering and Technology (ABET). The course work must include at least:

1) One year (32 SCH) of an appropriate combination of mathematics and basic sciences,
2) One-half year (16 SCH) of humanities and social sciences,
3) One and one-half years (48 SCH) of engineering topics.

Although the electrical engineering and telecommunications engineering curricula that follow have been designed to meet these criteria, students have the responsibility, in consultation with an advisor, to monitor their own choice of courses carefully to be certain that all academic requirements for graduation are being satisfied. Students are strongly encouraged to take courses in such subjects as accounting, industrial management, finance, personnel administration, and engineering economy.

Fast Track Baccalaureate/Master's Degrees

In response to the need for advanced education in electrical engineering, a Fast Track program is available to exceptionally well-qualified U.T. Dallas undergraduate students who meet the requirements for admission to the graduate school. The Fast Track program is designed to accelerate a student's education so that both a B.S.E.E. and an M.S.E.E. or a B.S.T.E. and an M.S.T.E. degree can be earned in five years of full-time study. This is accomplished by (1) taking courses (typically electives) during one or more summer semesters, and (2) beginning graduate course work during the senior year. Details of the requirements for admission to this program are available from the College Master.

Bachelor of Science in Telecommunications Engineering Degree Requirements (130 hours)

I. Core Curriculum Requirementsː 42 hours

A. Communication (6 hours)
   3 hours Communication (RHET 1302)
   3 hours Professional and Technical Communication (EE 3390)
B. Social and Behavioral Sciences (15 hours)
   6 hours Government (GOVT 2301 and 2302)
6 hours History (HST 1301 and 2301)
3 hours Social and Behavioral Science elective
C. Humanities and Fine Arts (6 hours)
  3 hours Fine Arts (AP 1301)
  3 hours Humanities (A&H 1301)
D. Mathematics and Quantitative Reasoning (6 hours)
  6 hours Calculus (Math 2417 and 2419)
E. Science (9 hours)
  8 hours Physics (PHYS 2325, 2125, 2326 and 2126)
  4 hours Chemistry (CHM 1311 and 1111)

¹ Curriculum Requirements can be fulfilled by other approved courses from accredited institutions of higher education. The courses listed in parentheses are recommended as the most efficient way to satisfy both Core Curriculum and Major Requirements at U.T. Dallas.

II. Major Requirements: 76 hours

Major Preparatory Courses (31 hours)
  CHM 1111 General Chemistry Laboratory
  CHM 1311 General Chemistry
  CS 1315 Computer Science I
  CS 2305 Discrete Mathematics for Computer Science I
  CS 2306 Discrete Mathematics for Computer Science II
  CS 2315 Computer Science II
  EE 2110 Introduction to Digital Systems Laboratory
  EE 2310/CS2310 Introduction to Digital Systems
  MATH 2417 Calculus I
  MATH 2419 Calculus II
  MATH 2420 Differential Equations
  TE 3341 Probability, Statistics and Random Processes

Major Core Courses (43 hours)
  CS/TE 3345 Algorithm Analysis and Data Structures
  CS/TE 4348 Operating Systems Concepts
  CS/TE 4390 Computer Networks
  CS/TE 3354 Software Engineering
  EE 1102 Introduction to Experimental Techniques
  EE 3120 Digital Circuits Laboratory
  EE 3150 Communication Systems Laboratory
  EE 3320 Digital Circuits
  EE 3350 Communication Systems
  EE 3390 Professional and Technical Communication
  EE 4360 Digital Communications
  EE 4361 Introduction to Digital Signal Processing
  EE/TE 4365 Introduction to Wireless Communication
  EE/TE 4367 Telecommunications Switching and Transmission
  TE 3102 Signals and Systems Laboratory
  TE 3201 Electrical Network Analysis Laboratory
  TE 3301 Electrical Network Analysis
  TE 3302 Signals and Systems
  TE 4190 Seminar in Industrial Practice
II. Core Curriculum Requirements: 42 hours

Mathematics Core (22 hours)

- MATH 1325 or MATH 1326 (3 semester hours)
- MATH 2112 (4 semester hours)
- MATH 3330 (3 semester hours)
- MATH 4331 (3 semester hours)
- MATH 4332 (3 semester hours)
- MATH 4335 (3 semester hours)
- MATH 4338 (3 semester hours)

Science Core (11 hours)

- CHM 1311 (CHEM 1311) General Chemistry I (3 semester hours)
- CHM 2311 (CHEM 2311) General Chemistry II (3 semester hours)
- CHM 3311 (CHEM 3311) Physical Chemistry (3 semester hours)
- CHM 4311 (CHEM 4311) Advanced Physical Chemistry (3 semester hours)

Computer Science Core (9 hours)

- CS 1315 (COSC 1315) Computer Science I (3 semester hours)
- CS 2305 (MATH 2305) Discrete Mathematics for Computing I (3 semester hours)
- CS 2315 (COSC 2315) Computer Science II (3 semester hours)
- CS 3305 Discrete Mathematics for Computing II (3 semester hours)

General Education Core (18 hours)

- A&H 1301 (HUMA 1301) Exploration of the Humanities (3 semester hours)
- AP 1301 (ARTS 1301) Exploration of the Arts (3 semester hours)
- CHM 1111 (CHEM 1111) General Chemistry Laboratory I (1 semester hour)
- CHM 1311 (CHEM 1311) General Chemistry I (3 semester hours)

III. Elective Requirements: 12 hours

Advanced Electives (6 hours)

- All students are required to take at least six hours of advanced electives outside their major field of study. These must be either upper-division classes or lower-division classes that have prerequisites.

Free Electives (6 hours)

- Both lower- and upper-division courses may count as free electives, but students must complete at least 51 hours of upper-division credit to qualify for graduation.

IV. Specified Course Descriptions

A&H 1301 (HUMA 1301) Exploration of the Humanities (3 semester hours) An introduction to the concept of cultural tradition through the study of selected works of literature, philosophy, music, and visual art. Emphasis on the relations among various forms of cultural expression and developing students' ability to interpret complex artistic works in their historical, cultural, and intellectual contexts. General education core course. (3-0) S

AP 1301 (ARTS 1301) Exploration of the Arts (3 semester hours) This course introduces students to the physical and intellectual demands required of the author, the performer, and the visual artist. This introduction includes, but is not limited to, the student's production of a creative project as well as written assessments of art and performance. (3-0) Y

CHM 1111 (CHEM 1111) General Chemistry Laboratory I (1 semester hour) Introduction to the chemistry laboratory. Experiments are designed to demonstrate concepts covered in CHM 1311; including properties and reactions of inorganic substances, and elementary qualitative and quantitative analysis. (0-3) S

CHM 1311 (CHEM 1311) General Chemistry I (3 semester hours) Introduction to elementary concepts of chemistry theory. The course emphasizes chemical reactions, the mole concept and its applications, and molecular structure and bonding. (3-0) S

CS 1315 (COSC 1315) Computer Science I (3 semester hours) Computer programming in a high-level, block structured language. Algorithmic thinking and the history and utility of machines which automate it. Basic data types and variables, memory usage, control structures (sequential, selection, repetition), functions and parameter passing, recursion, console and file input/output. Prerequisite: Basic computer literacy/programming skills (see CS 1115 description) or concurrent enrollment in CS 1115. (3-0) S

CS 2305 (MATH 2305) Discrete Mathematics for Computing I (3 semester hours) Principles of counting. Boolean operations. Propositional calculus. Sets, relations, functions, strings, languages, partial orders, and lattices. Prerequisite: MATH 1326 or MATH 2419 or consent of the instructor. (3-0) S

CS 2315 (COSC 2315) Computer Science II (3 semester hours) Advanced programming techniques, including an introduction to object-oriented programming. Classes, inheritance, dynamic function binding, strings, stacks, queues, lists, and trees. Dynamic memory allocation/management. Prerequisite: CS 1315. (3-0) S

CS 3305 Discrete Mathematics for Computing II (3 semester hours) Topics in enumeration; principle of inclusion and exclusion. Algorithmic complexity; recurrence relations. Graph theory. Prerequisite: CS 2305. (3-0) S

CS/TE 3345 Algorithm Analysis and Data Structures (3 semester hours) Metrics for performance evaluation of algorithms. Formal treatment of basic data structures such as arrays, stacks, queues, lists, trees. Various sorting and searching techniques. Fundamental graph algorithms. Prerequisites: CS 2315 and CS 3305. (3-0) S
CS/TE 3354 Software Engineering (3 semester hours) Introduction to software life cycle models. Software requirements engineering, formal specification and validation. Techniques for software design and testing. Cost estimation models. Issues in software quality assurance and software maintenance. Prerequisites: CS 2315 or CS 3333, and CS 2305 (3-0) S

CS/TE 4348 Operating Systems Concepts (3 semester hours) An introduction to fundamental concepts in operating systems: their design, implementation, and usage. Topics include process management, main memory management, virtual memory, I/O and device drivers, file systems, secondary storage management, and an introduction to critical sections and deadlocks. Prerequisites: CS 3345 (may be taken concurrently), CS 4340, and a working knowledge of C and UNIX. (3-0) S

CS/TE 4390 Computer Networks (3 semester hours) The design and analysis of computer networks. Topics include: the ISO reference model, transmission media, medium-access protocols, LANs, data link protocols, routing, congestion control, internetworking, and connection management. Prerequisite: CS/TE 3345. (Same as TE 4390) (3-0) S

EE 2110 Introduction to Digital Systems Laboratory (1 semester hour) Laboratory to accompany EE 310. The purpose of this laboratory is to give students an intuitive understanding of digital circuits and systems. Laboratory exercises include construction of simple digital logic circuits using prototyping kits and board-level assembly of a personal computer. Corequisite: EE 2310. (0-3) S

EE 2310 Introduction to Digital Systems (3 semester hours) Introduction to hardware structures and assembly-language components that form the basis of the design of modern computer systems. Internal data representation and arithmetic operations in a computer. Basic logic circuits, MIPS assembly language. Overview of PC architecture. Prerequisite: CS 1315. (3-0) S

EE 3120 Digital Circuits Laboratory (1 semester hour) Laboratory to accompany EE 4320. Design, assembly, and testing of logic circuits. Prerequisite: EE 1102. Corequisite: EE 3320. (0-3) S

EE 3150 Communication Systems Laboratory (1 semester hour) Laboratory to accompany EE 4350. Fundamental elements of communications systems hardware; use of spectrum analyzers and other measurement instruments typically encountered in communication systems; design of active filters in communications systems; analog frequency and amplitude modulators and demodulators; data communication systems. Corequisite: EE 3350. (0-3) S

EE 3320 Digital Circuits (3 semester hours) Boolean logic. Design and analysis of combinational logic circuits using SSI and MSI. Design and analysis of synchronous state machines. Use of programmable logic devices and simple CAD tools. Prerequisite: CS 2325 or EE 2310. Corequisite: EE 3120. (3-0) S

EE 3350 Communications Systems (3 semester hours) Fundamentals of communications systems. Review of probability theory and Fourier transforms. Filtering and noise. Modulation and demodulation techniques, including amplitude, phase, pulse code, pulse position, and pulse width modulation concepts. Time division multiplexing. Prerequisites: EE 3302, EE 3300 and EE 3341. (3-0) S

EE 3390 Professional and Technical Communication (3 semester hours) Course utilizes an integrated approach to writing and speaking for the technical profession. The writing component focuses on writing professional quality technical documents such as proposals, memos, abstracts, reports and letters. The oral communication part of the course focuses on planning, developing and delivering dynamic, informative and persuasive presentations. Gives students a successful communication experience working in a functional team environment using a total on-line/real time learning environment. Prerequisite: RHET 1302. (3-0) S

EE 4360 Digital Communications (3 semester hours) Information, digital transmission, channel capacity, delta modulation, and differential pulse code modulation are discussed. Principles of coding and digital modulation techniques such as Amplitude Shift Keying (ASK), Frequency Shift Keying (FSK), Phase Shift Keying (PSK), and Continuous Phase Frequency Shift Keying (CPFSK) are introduced. M-ary signaling such as Quadrature amplitude and phase shift keying, and M-ary PSK and FSK are also discussed. Prerequisite: EE 4350. (3-0) T

EE 4361 Introduction to Digital Signal Processing (3 semester hours) An introduction to the analysis and design of discrete linear systems, and to the processing of digital signals. Topics include time and frequency domain approaches to discrete signals and systems, the Discrete Fourier Transform and its computation, and the design of digital filters. Prerequisites: EE 3302, EE 4300. (3-0) T

EE/TE 4365 Introduction to Wireless Communication (3 semester hours) Introduction to the basic system concepts of cellular telephony. Mobile standards, mobile system architecture, design, performance and operation. Voice digitization and modulation techniques; PCS technologies. Prerequisite: EE 4350. (3-0) Y

EE/TE 4367 Telecommunications Switching and Transmission (3 semester hours) Trunking and queuing, switching
technologies: voice, data, video, circuit switching and packet switching, transmission technologies and protocols, transmission media - copper, fiber, microwave, satellite, protocols - bipolar formats, digital hierarchy, optical hierarchy, synchronization, advanced switching protocols and architectures; frame relay, ATM, HDTV, SONET. Prerequisite or Corequisite: EE 4350. (3-0) Y

GOVT 2301 Constitutional Foundations and Political Behavior in the U.S. and Texas (3 semester hours) This course examines the evolution and current state of political behavior and public policy making in the U.S. and Texas. Topics discussed will include the constitutions, federalism, intergovernmental relations, voting, elections, political parties, public opinion, and interest groups. (Fulfills one-half of the legislative requirement of 6 hours of American government.) (3-0) S

GOVT 2302 Political Institutions in the U.S. and Texas (3 semester hours) This course explores the primary institutions of U.S. and Texas government. It examines the bureaucracy as well as the executive, legislative, and judicial branches of government at the state and federal level. (Fulfills one-half of the legislative requirement of 6 hours of American government.) (3-0) S

HST 1301 Themes and Ideas in American History (3 semester hours) An introduction to the methods of historical inquiry through the study of selected main themes in American history. A course designed to offer students an understanding of the historical and cultural context of America in the contemporary world. Fulfills one-half of the Texas legislative requirement for six hours in American history. (3-0) S

HST 2301 Issues in American History (3 semester hours) Readings, commentary, and discussion aimed at varying aspects of history and culture. Fulfills one-half of the Texas legislative requirement for six hours in American history. (3-0) Y

MATH 2417 Calculus I (4 semester hours) Functions, limits, continuity, differentiation; integration of function of one variable; logarithmic, exponential, and inverse trigonometric functions; techniques of integration, and applications. Three lecture hours and two discussion hours a week. Prerequisite: MATH 2312 or equivalent. (4-0) S

MATH 2419 Calculus II (4 semester hours) Continuation of MATH 2417. Improper integrals, sequences, infinite series, power series, parametric equations and polar coordinates, vectors, vector-valued functions, functions of several variables, partial derivatives and applications, multiple integration. Three lecture hours and two discussion hours a week. Prerequisite: MATH 2417. (4-0) S

MATH 2420 Differential Equations with Applications (4 semester hours) Topics covered will be drawn from the following list: First order differential equations, ordinary differential equations, system of linear differential equations, stability, series solutions, special functions, Sturm-Liouville problem, Laplace transforms and linear differential equations, numerical solutions and applications in physical sciences and engineering using computers. Three lecture hours and two discussion hours per week. Prerequisite: MATH 2419. (4-0) S

PHYS 2125 Physics Laboratory I (1 semester hour) Laboratory course to accompany PHYS 2325. Personal computer-based data presentation and curve fitting. Basic measurement concepts such as experimental uncertainty, mean, standard deviation, standard error, and error propagation will be covered. Corequisite: PHYS 2325. (0-3) Y

PHYS 2126 Physics Laboratory II (1 semester hour) Laboratory course to accompany PHYS 2326. Builds on concepts of Physics Lab I. Will emphasize the use of an oscilloscope and measurements using simple circuits constructed in class. Corequisite: PHYS 2326. (0-3) Y

PHYS 2325 Mechanics and Heat (3 semester hours) Calculus based. Basic physics including a study of space and time, kinematics, forces, energy and momentum, conservation laws, rotational motion, torques, harmonic oscillation, temperature and heat. Two lectures and one recitation session per week. Prerequisite: MATH 2417. Corequisite: PHYS 2125. (3-0) Y

PHYS 2326 Electromagnetism and Waves (3 semester hours) Continuation of PHYS 2325. Topics include electrostatics and electromagnetics, electric field and potential, electric currents, magnetic fields, laws of Coulomb, Ampere, and Faraday, Maxwell's theory of propagation and optics. Two lectures and one recitation session per week. Prerequisites: PHYS 2325 and MATH 2419. Corequisite: PHYS 2126. (0-3) Y

RHET 1302 (ENGL 1302) Rhetoric (3 semester hours) The course presents an integrated approach to writing, reading, and critical thinking by developing the grammatical, logical, and rhetorical skills necessary for university writing. All classes work in a computerized learning environment. Students are taught basic computer literacy and submit all work electronically and on paper. (3-0) S

TE 3102 Signals and Systems Laboratory (1 semester hour) Laboratory, based on MATLAB, to accompany EE 3302. Fourier analysis, implementation of discrete-time linear time-invariant systems, applications of Fast Fourier Transform,
design of digital filters, applications of digital filters. Corequisite: EE 3302. Prerequisite: MATH 2420, EE 3301 and CS 1315. (0-3) S

**TE 3201 Electrical Network Analysis Laboratory** (1 semester hours) Laboratory to accompany TE 3301. Design, assembly, and testing of linear electrical networks and systems. Use of computers to control electrical equipment and acquire data. (0-2) S

**TE 3301 Electrical Network Analysis** (3 semester hours) Analysis and design of RC, RL, and RLC electrical networks. Time domain and phasor domain approaches. Introduction to resistors, capacitors and inductors. Analysis tools such as Kirchoff's laws, Thevenin and Norton equivalents, transfer functions, frequency response, and Bode plots. Prerequisites: differential equations (may be taken concurrently). (3-0) Y

**TE 3302 Signals and Systems** (3 semester hours) Advanced methods of analysis of electrical networks and linear systems. Laplace transforms, Fourier series, and Fourier transforms. Response of linear systems to step, impulse, and sinusoidal inputs. Convolution, system functions, and frequency response. Z transforms and digital systems. Prerequisites: MATH 2420, EE 3301. (Same as EE 3302.) (3-0) Y

**TE 3341 Probability, Statistics and Random Processes in Engineering** (3 semester hours) Introduction to probability modeling and the statistical analysis in engineering and computer science. Introduction to Markov chains models for discrete and continuous time queuing systems in Telecommunications. Computer simulations. Prerequisite: MATH 2419, EE 3302 recommended. (3-0) Y

**TE 4190 Seminar in Industrial Practice** (1 semester hour) Seminar on current issues of industrial practice, corporate structure and technology issues. Prerequisite: senior standing. (1-0) Y

**TE 4380 Senior Design Project** (3 semester hours) Senior design project. Requirements will be set by individual faculty members, but will include a written report and a formal oral presentation of the final design product. (0-3) R
