1. What is the formula for the de Broglie wavelength?

2. What is the formula for centrifugal force?

3. What is the formula for the circumference of a circle?

4. What are the formulas for the electrostatic force and potential?

5. What is the formula for angular momentum of a particle in circular motion?

6. Show that $\nabla^2 u(x, y, z) = \nabla \cdot \nabla u(x, y, z)$?
