Bloom's taxonomy
This pyramid shows different levels of thinking when we learn. Each section builds on the previous one. Thus, we must learn the lower levels before we can move to the higher levels of the pyramid.

SYNTHESIS
Take the information and create a new (original) product.

EVALUATION
Judge based on standards. Understand values of the information to make decisions.

ANALYSIS
Break down the parts and identify components. Determining the logic and sequence.

APPLICATION
Using the information to solve problems. Seeing relationships and connections and how they apply.

COMPREHENSION
Taking the information and restating it in your own words (higher level of understanding the information).

KNOWLEDGE
Memorizing verbatim information (rote). Being able to remember, but not necessarily understanding the material fully.
