Master of Science in Energy Management

Curriculum
The Master of Science in Energy Management degree program prepares students for careers in oil, gas, renewable energy, and electricity companies, banks and financial institutions that trade energy commodities, energy-focused consulting firms and major energy consuming corporations.

The curriculum includes a significant number of experiential learning opportunities. Courses incorporate a variety of techniques to teach students how to value energy companies and projects, develop operating strategies, negotiate contracts and manage energy-specific risks. The development of the program was motivated by a high concentration of energy companies in the Dallas-Fort Worth area and UT Dallas’ efforts to address skill shortages in industries critical to the Texas economy.

Career Options
Graduates of the program seek positions such as: Managers of energy companies (oil, gas, renewable energy and electricity); researchers, analysts and traders at banks and financial institutions that trade energy commodities, as well as energy producing and consuming companies; energy-focused consulting and policy analysis at federal, state and local government agencies.

Degree Program
The MS in Energy Management is a 36 semester credit hour degree program.

For complete admission and degree requirements, view the Graduate Catalog at catalog.utdallas.edu.
