MOMENTUM CONTINUES TO BUILD: When our 2012 fiscal year ended on Aug 31, we had to double-check our statistics. The number of donors who collectively gave more than $35 million was unprecedented in UT Dallas history. This is even more remarkable when considering that 2011 was a record year as well! But the increase in the number of donors from the prior year tells only part of the story. Since the Realize the Vision campaign began in 2009, the number of alumni who give annually has more than doubled. We have also seen similarly impressive increases from our own faculty and staff, as well as from other donors, including companies, foundations and other individuals.

Thanks to these donors, UT Dallas is beginning to see the levels of support needed to achieve our goal. Every gift matters and every gift gets us closer to our $200 million goal by Dec. 31, 2014. Join us in this effort and help make 2013 another record year.

Callier Center Event Raises $100,000 for Patient Care

THE FIRST CALLIER CARES LUNCHEON brought together 320 philanthropists, grateful patients and families, and top-flight researchers and clinicians to support the work of the Callier Center, which has provided hearing and speech-language therapies to thousands of North Texans during the past five decades.

The May gathering featured the inaugural presentation of the Ruth and Ken Altshuler Callier Center Award. The Altshulers, who are among Dallas’ most respected community leaders, were honored as the first recipients of the award.

Through the Altshuler’s benevolence, the Callier Care Fund was created in 2012 to benefit patients of all ages who would otherwise be unable to afford clinical care. The funds raised from the luncheon will contribute directly to patient care and ensure that Callier can continue its legacy as a national resource for children and adults with speech, language and hearing disorders. Community leader and founder for the Callier Center board member Lizby Hunt chaired the luncheon.

“Libby’s commitment to Callier inspired an amazing amount of support from the community,” said Sharon Farr Patrick, director of development for Callier. “The results generated by this first event are astounding. We are truly grateful to our generous supporters for the difference they are making in the lives of our patients and their families.”

New Directorship Honors Callier Center Pioneer

DR. LUDWIG A. MICHAEL, A BELOVED PHYSICIAN and Callier Center for Communication Disorders leader, was honored with a directorship that bears his name and will support research at Callier in perpetuity.

The permanent endowment, which will create the Ludwig A. Michael, MD, Callier Center Executive Directorship, pays tribute to Michael for his outstanding service as a trustee and former president of the Foundation for the Callier Center. The directorship, which marks an important step for Callier, was established through an initial gift of $200,000 from Communities Foundation of Texas. With this focused support, current and future leaders of the Callier Center may continue their own significant research programs and take advantage of opportunities to advance the center. To increase the impact of this gift, Callier has set a goal of raising $1,000,000 to provide additional support for the director’s research. The initial gift, and any gifts toward this initiative, count toward Callier’s $8 million campaign goal, as part of the University’s Realize the Vision campaign. More than $3.4 million has already been raised for Callier.

The first holder of the directorship will be Dr. Thomas Campbell, executive director of the Callier Center and a professor in the School of Behavioral and Brain Sciences. The endowment will help support his research on the physiological, environmental and genetic variables for the early identification of speech and language disorders in children. “The endowing of this position has been a long-time goal of the University and an important step in Callier’s continued tradition of excellence,” said Dr. Bert Moore, dean of the School of Behavioral and Brain Sciences and the Auge and Margareta Mallor Distinguished Professor. “To be able to honor Ludwig Michael with this directorship is most fitting. He was there at the creation of Callier and has been a continuing source of support and wisdom throughout its history,” his wife, Carmen Michael, couldn’t agree more. “When Dean Moore called me about the Callier Center’s wish to establish the directorship in honor of Ludwig, I was very much pleased and wanted to help support it.”

Michael, a prominent Dallas otolaryngologist, played a pivotal role in the Callier Center’s early years. He received a bachelor of arts and a medical degree from New York University and completed otolaryngology work at Barnes Hospital in St. Louis. He came to Dallas in 1968, after serving at the Walter Reed Army Medical Center, where he worked with soldiers who had suffered hearing loss. Michael joined the staff of Baylor Medical Center, where he was named chief of otolaryngology in 1966 and again in 1975. He also served on the clinical faculty of UT Southwestern Medical Center. “This gift is vital to the future of the Callier Center and the School of Behavioral and Brain Sciences,” said Campbell. “It is another example of the enormous generosity by the Michoens and other donors to the directorship in support of our University. I am directly honored to have my name associated with the legacy of such an extraordinary man who continues to give so much.”
